Fares Salhi

Computer Science Student (B.Sc.), TU Darmstadt | Cybersecurity | AI Security

Address: Heidelberger Landstraße 52A, 64297 Darmstadt, Germany
Phone: +49 163 1661119 | Email: feressalhi425@gmail.com
GitHub: github.com/feres-salhi | LinkedIn: linkedin.com/in/fares-salhi-03b53530a | Portfolio: faressalhi.com

PROFILE

Third-semester Computer Science student at TU Darmstadt targeting cybersecurity and AI security roles: product security, security engineering and AI agent security. Participant in the TU Darmstadt × usd AG Hacker Contest (WiSe 2026/27). Security projects with measured, reproducible results: a CRA reporting tool (1,450 tests, 11 AI-pentest findings fixed), an AI agent red-teamed to 13/13, 0 of 224 personal values leaked in a 32-hour hackathon, and 100% of spoofed aircraft caught at 1.6% false alarms.

EXPERIENCE

Hacker Contest Participant (Penetration Testing), usd AG × TU Darmstadt **WiSe 2026/27**

Practical pentesting course with the usd HeroLab team | Darmstadt

- Admitted via a solo entrance challenge: forensic report in German on a tampered e-passport; decrypted an XOR / one-time-pad message, checked data and certificates against ICAO 9303, rated 16 code vulnerabilities and proved 6 with my own test scripts.
- This semester: hands-on pentesting in the usd PentestLab and team vulnerability research on open-source software.

PROJECTS

CRA Copilot: EU Cyber Resilience Act 24-hour vulnerability reporting **11/2026**

github.com/feres-salhi/cra-copilot | Python, CycloneDX SBOM, OSV.dev, CISA KEV, pytest

- Open-source CLI for CRA Art. 14: reads a product's SBOM, checks every component against OSV.dev and CISA KEV, flags possible report cases (caught Log4Shell live in a demo product) and drafts the 24h early warning in German and English; a human approves every report, the tool never sends anything.
- Attacked it with an AI pentester (Strix): 11 findings (2 Medium, 9 Low), all fixed with regression tests written first; root cause: "no answer" treated as "safe". 1,450 tests pass, Bandit 0 issues in 4,455 lines.
- Limited the AI to approved sentences after reviewers beat word-list fact checks; found and fixed an API-key leak in my own test.

SÜSIE: AI compliance review assistant (Futury Build Days hackathon) **10/2026**

github.com/feres-salhi/futury-itsg-review-assistant | Python, pytest, RAG, pseudonymization

- 32-hour team hackathon (Futury, hessian.AI, ITSG, MAINGAU): owned the security and trust layer of an AI assistant for ITSG's legally required review of payroll software (§ 95b SGB IV).
- Input guard stopped 14/14 attacks with 0 false alarms; quote-verified retrieval over 1,219 rulebook sections; privacy airlock: a leak test found a missed value, after my fix 0 of 224 leak; 167 tests pass.

AgentWarden: AI agent containment and red-teaming **10/2026**

github.com/feres-salhi/agentwarden | Docker, Open Policy Agent (Rego), promptfoo, GitHub Actions

- Contained a tool-using AI agent (Claude API) in a hardened Docker sandbox with a deny-by-default OPA policy, an audit log and a watchdog that kills the agent in about 430 ms (inspired by NVIDIA's OASP).
- Red-teamed it with 13 promptfoo tests mapped to OWASP: found a case-sensitivity bypass that leaked a honeytoken, fixed the policy and verified 13/13; 18 policy unit tests in CI.

ADS-B Spoofing Detector: ML attack detection on live aircraft signals **10/2026**

github.com/feres-salhi/adsb-security-lab | Python, scikit-learn, RTL-SDR receiver

- Trained an Isolation Forest on live aircraft data I captured with a 27-euro radio; synthetic spoofs: 100% caught, 1.6% false alarms.
- Stress-tested it until it broke: spoofs below about 1,100 km/h evade it, traced back to cruise-heavy training data.

Mini SOC in the Cloud: Elastic SIEM and AI alert triage **10/2026**

github.com/feres-salhi/elastic-siem-ai-soc-automation | AWS, Elastic Security (SIEM/EDR), KQL, Tines

- Hardened a Windows Server on AWS, wrote a KQL rule (MITRE ATT&CK T1033) and automated AI alert triage with Tines.

EDUCATION

B.Sc. Computer Science, Technical University of Darmstadt **since 10/2025, expected 2028**

Coursework includes programming, algorithms and data structures, digital systems, logic and mathematics.

Cycle Préparatoire (MPI), INSAT, Tunis: mathematics, physics and computer science **2023 - 2024**

Baccalauréat (Tunisian secondary-school diploma), with honors, top 0.7% nationwide **2023**

SKILLS

AI Security: Prompt injection (direct and indirect), agent red-teaming (promptfoo), AI agent containment, LLM privacy guards, adversarial ML testing, OWASP Top 10 for LLM and Agentic Applications; Gray Swan Arena AI red-teaming competition (10/2026)
Security Operations: Elastic Security (SIEM/EDR), KQL detection rules, MITRE ATT&CK, Tines (SOAR), AWS EC2, alert triage
Security Engineering: Vulnerability management (SBOM/CycloneDX, OSV, CISA KEV), SAST (Bandit), AI-assisted pentesting (Strix), Docker hardening, Open Policy Agent (Rego), integrity checks (SHA-256, HMAC)
Security Fundamentals: EU Cyber Resilience Act (Art. 14), digital forensics, secure code review, GDPR, NIST CSF, TCP/IP
Programming and Tools: Python, Java, C, pytest, GitHub Actions, Git, Claude and Gemini APIs, scikit-learn
Data and Automation: Power BI, Power Automate

LANGUAGES

German (C1), English (C1), French (C1)
